

DIRECTIONAL STEP-COUNTER APPLICATION

Created with **advanced sensors** and an **intuitive interface**, the Directional Step Counter app allows you to **take control** of your direction and step counting game to the **next level** through its **compass** and **directional step counter**.

Easily view your progress towards your **fitness goals** with the Directional Step Counter app's **Total Steps pop-up** feature, accessible with one tap.

Tracks the number of steps you take in different directions, helping you **improve** your **directional awareness** for better navigation with an **accessible reset** button for step management.

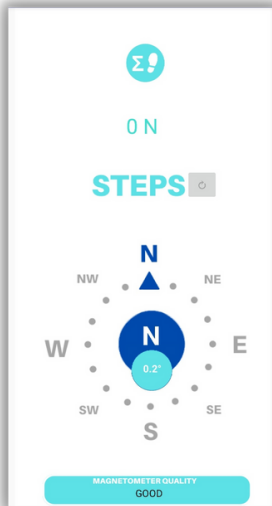

Optimises the device **sensors** to calculate your orientation and display it on the app with both direction and bearing angle

The Magnetometer Quality Detection feature allows for even **greater navigation accuracy**, displaying the **quality** of your magnetometer with **colour-coded accuracy** for ease of use.

INSTRUCTION MANUAL

6

1

Turn on the application and tilt in the intended direction to use the compass. The direction, rotation, and bearing will be displayed.

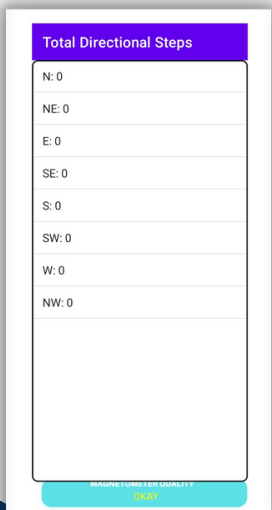

2

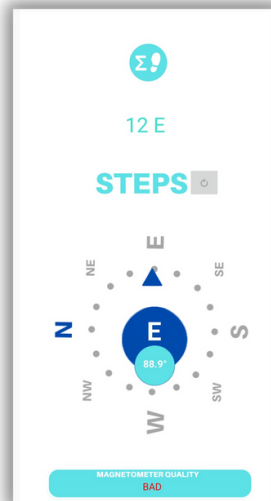

If your magnetometer quality is indicated as "BAD", either move the phone in a figure 8 pattern or use the compass in another location.

Start walking on the facing on the intended direction from the compass. The number of steps are recorded.

5

3

By pressing the total steps button again, the pop-up window can be seen with all directional steps being zero.

Press the button to see the total steps from each direction. A pop-up window will open, displaying it.

If you intend to reset the steps to create a new journey, the button can be pressed. This will reset all the directional steps to zero.
